

# Design Analysis

## Affordances

1. Buttons with a raised appearance or a shadow effect indicate that they can be clicked or tapped.
2. Text that is underlined or displayed in a different color suggests that it is a clickable link.
3. Drop-down menus or expandable sections that have a small arrow or triangle symbol indicate that they can be expanded or collapsed.
4. Sliders or draggable elements allow users to adjust values or settings by moving them horizontally or vertically.
5. Hover effects, such as color changes or animations, indicate that an element can be interacted with.

## Gestalt

1. In the About Us section, I have used Gestalt principles to organize the information and create visual hierarchy.
2. In the Programs section, I have applied Gestalt principles to showcase the different projects and initiatives.

## Constraints

1. I don't have a footer, having one will make navigation easier.
2. I don't have a search bar in my design and Colleen and Scott have mentioned that it would be good to include one.
