Group E - Project Information

Project Team Members

• Shahzil Siddiqui

• Alvin John Tolentino

• Quing Vergel Rosete

• Ansar Ahmed

• Linton Dsouza

North Star Customer

NorthStar, being primary, is represented by organizations such as NVSSN and Data for Good, along with the "change makers" who serve as a primary audience for the SDG monitoring system.

Carryover Customer

Carryover customers, including investors, donors, community leaders, and researchers are crucial contributors and beneficiaries of the project.

Project Assumptions

Several project assumptions guide the development process, including the utilization of tools like StoriesOnBoard, WordPress, and GitHub. The integration of static data and research data provided by Scott from Data for Good and government websites like stats Canada ensures a comprehensive and data-driven approach.

Project constraints

The success of the project is contingent on addressing certain constraints such as technical expertise required for working within bounds of WordPress. Communication, Collaboration and managing stakeholder expectations are identified as important constraints, emphasizing the need for effective coordination among team members. Lastly, navigating the available information on Saskatchewan's SDGs, and being confined within the bounds of the provided data both serves as project constraint.
